10G 16-Port Managed Aggregation Switch

Model: US-16-XG

Non-Blocking Throughput Switching

Maximum Performance and Low Latency

10G Ethernet SFP+ and RJ45 Ports

## 10G Aggregation Switch for Enterprise Networks

Build and expand your network with Ubiquiti Networks® UniFi® Switch 16 XG, part of the UniFi Enterprise System. The US-16-XG is a fully managed, 16-port, 10G fiber switch that enhances network capacity by providing high-bandwidth aggregation connectivity to multiple switches in your network.

The US-16-XG offers an extensive suite of advanced Layer-2 switching features and protocols.

### Switching Performance

The US-16-XG offers the forwarding capacity to simultaneously process traffic on all ports at line rate without any packet loss.

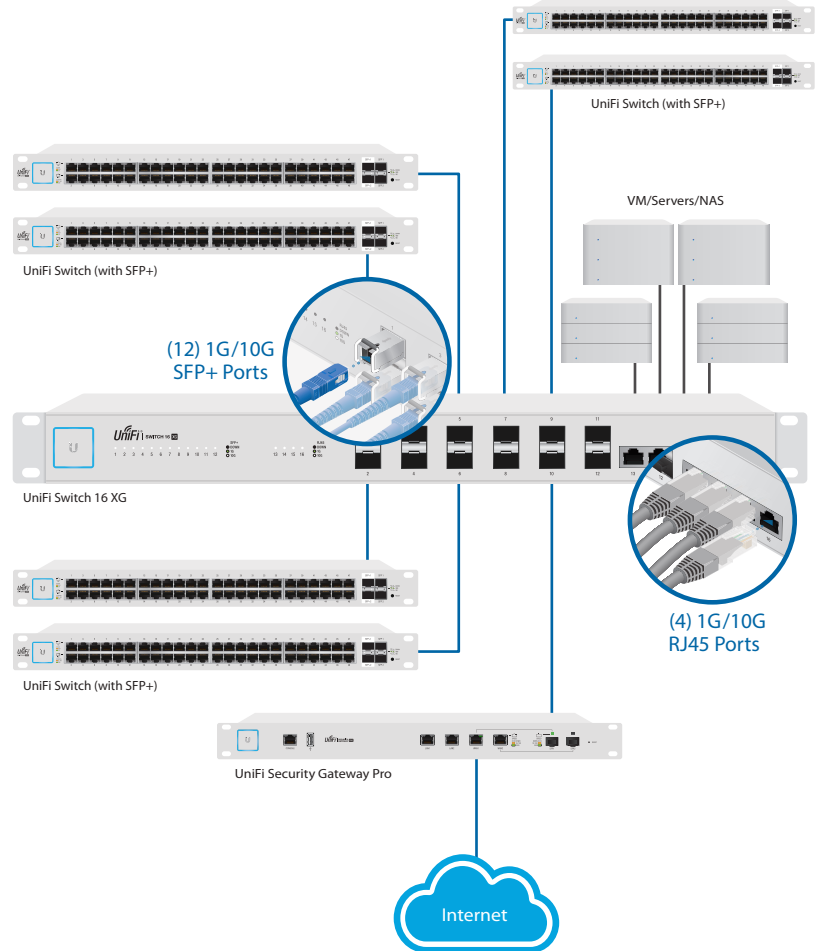

The total non-blocking throughput is up to 160 Gbps.

### 10G High-Capacity Links

The US-16-XG offers maximum performance and low latency as an aggregation switch.

For fiber connectivity, it features 12 SFP+ ports. For copper connectivity, the US-16-XG offers four RJ45 ports that support 10GBASE-T, the standard for 10 Gbps connections using Cat6 (or higher) cabling and RJ45 connectors.

## Deployment Example

The US-16-XG connects to the following:

- Multiple UniFi Switches and a 1G/10G router via SFP+ ports
- VM, Server, NAS, or other network devices via 1G/10G RJ45 ports

# UniFi Controller

Designed for convenient management, the UniFi Controller software allows admins to configure and monitor the UniFi Switch and other UniFi devices using a graphical user interface. You can download it from [www.ubnt.com](http://www.ubnt.com) at no cost.

## Multi-Site Management

A single instance of the UniFi Controller running in the cloud can manage multiple UniFi sites within a centralized interface. Each site is logically separated and has its own network monitoring, configuration, maps, statistics, and admin accounts.

## Switch Configuration

You can access any managed UniFi Switch through the UniFi Controller to configure a variety of features:

- Operation mode (switching, mirroring, or aggregate) per port
- Network/VLAN configuration
- Jumbo frame and flow control services
- Network settings
- Storm control setting per port
- Spanning tree configuration
- 802.1x control and RADIUS VLAN
- Debug terminal option for command-line interface

## Switch Port Status

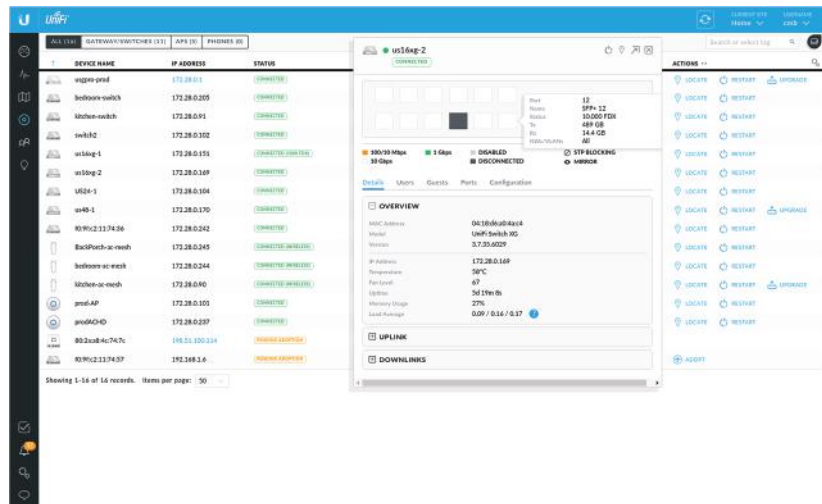

You can also view status information for each port:

- Connection speed and duplex mode
- TX/RX data rates
- Network/VLAN setting

## Dashboard

The *Dashboard* tab provides a visual representation of your network's status. Basic information is provided for each network segment.

## Device Configuration

The *Devices* screen displays the UniFi devices discovered by the UniFi Controller. You can access each managed device for device details and configuration.
